01 SUMMARY

Full-Stack Developer with 2+ years of experience building SaaS products with React, TypeScript, and Node.js. Currently working on EasySocial.io, a WhatsApp automation and CRM platform, across the React front end and Node.js services. Comfortable taking a feature from UI through API to database.

02 EXPERIENCE

- Frontend Developer · EvolveNext Technologies Pvt. Ltd.

Apr 2025 – Present

Bengaluru, Karnataka

 - Build and maintain features for **EasySocial.io**, a B2B SaaS platform for WhatsApp automation, CRM, and campaign management used by **100+ businesses**.
 - Created reusable UI components with **React.js**, **TypeScript**, **MUI**, and **SCSS** that are shared across product modules, keeping the UI consistent and cutting duplicated code.
 - Developed **chatbot flow automation**, **audience segmentation**, and **campaign analytics** features, working across the React front end and Node.js APIs.
 - Built an internal **HR automation service** in Node.js: parses leave-request emails with the **Gemini API**, sends them to managers on **Discord** with approve/reject buttons, and tracks leave status and employee records.
 - Built a multi-stage content generation pipeline using LLM APIs to produce SEO articles in bulk.
- MERN Stack Developer · Saumic Craft

Mar 2024 – Dec 2024

Jaipur, Rajasthan

 - Built a **CRM platform** on the MERN stack with **role-based access control** for Admin, Manager, and Client users, covering client records and task workflows.
 - Improved API response times by rewriting slow **MongoDB** queries and adding indexes.
- Frontend Developer Intern · SRV IT Solutions

Nov 2023 – Feb 2024

Kota, Rajasthan

 - Built **10+ responsive pages** from Figma designs using React.js, HTML5, CSS3, and JavaScript.
 - Added lazy loading and code splitting to improve load times, bringing pages to **95+ Lighthouse** performance scores.

03 PROJECTS

- AI Video Ad Generator

React (Vite), AdonisJS, PostgreSQL, Tailwind CSS

 - Built an end-to-end platform for brands to create **ad and promotional videos**: enter product and brand details, generate a script, review it, then render the final video.
 - Generates ad scripts with LLM APIs using a **hook → problem → solution → call-to-action** structure, tuned to the brand's tone, audience, and video length.
 - Modeled the workflow as tracked stages (brief, script, scenes, render) in **PostgreSQL** via an **AdonisJS** API, so users can edit and regenerate any step without starting over.
- SEO Analyzer Platform

React, TypeScript, Node.js, PostgreSQL, Redis, Playwright

 - Built an SEO audit tool that crawls pages with **Playwright**, runs **20+ checks**, and produces a scored report for each site.
 - Queued crawl jobs with **BullMQ + Redis**, with retries and priorities so multiple sites can be crawled in parallel; stored audit results as **PostgreSQL JSONB**.
- Instagram Growth Analyzer

Node.js, Playwright, React.js

 - Built a tool that collects public engagement data (followers, likes, comments) from Instagram profiles and tracks it over time.
 - Classifies accounts as growing, stagnant, or declining based on follower and engagement trends, shown in a React dashboard.
